## Physicall Observations.

To let the Sanguine Blood, when the Moon  
hath her course in Pisces.

To let the Cholerick Blood, when the Moone  
is in Cancer or Pisces.

To let the Melancholy Blood, when the Moon  
is in Libra, Taurus, or Pisces.

To let the Phlegmatick Blood, when the Moon  
is in Sagittary, or Taurus.

To prepare Humors, the Moon being in Ge-  
mini, Libra, or Taurus.

Good to  
Purge

with Electuaries, the Moon in Cancer,  
with Pills, the Moone in Pisces.  
with Potions, the Moone in Taurus.

Phr.

## Physicall Observations.

- To take Vomits, the Moone being in  $\delta$  or the latter part of  $I$   
 To purge the Head by Razing, the Moone being in  $\delta$  or  $\eta$ .  
 To take Clisters, the Moone being in  $\gamma$  or  $\eta$ .  
 To stop Fluxes and Rheumes, the Moone being in  $\delta$  or  $\eta$ .  
 To bathe, when the Moone is in  $\delta$  or  $\eta$ .  
 To cut the Haire of the Head and Beard, the Moone in  $\delta$  or  $\eta$ .

## Briefe Observations of Husbandry.

Set, sow Seedes, Graft and Plant, the Moone in  $\delta$  or  $\eta$ .  
 And all kind of Corne in  $\delta$ .  
 Graft as the Moones increase, the being in  $\delta$  or  $\eta$ .  
 Shear: Sheepe at the Moones increase.  
 fell hard Timber from the full to the change.  
 fell frith, Coppice, and fowell at the first Quarter,  
 and old Cattle, the Moone in  $\gamma$  or  $\eta$ .  
 Kill fat Swine for Bacon (the better to keepe their fat  
 boyling) about the full Moone.

Note also, that the Exchequer openeth eight  
daies before any Terme begins, (except Tri-  
nity Terme) in which it openeth but foure  
dayes before.

A Description of the Foure  
Quarters of the yeere:  
And first of *Winter*.

☉ in ♍ ≈ ♎.

**T**Inter Quarter (after the Astronomers account) beganne the 12. day of December 1640. and continueth till the 11 of March 1641. So that alwaies the first part of the Astronomicall Winter is in one politique yeare, and the latter end thereof in the other: at which time was the shortest day of the yeare, by reason of the Summers greatest declination from the Equinoctiall line.

This Season of his owne naturall disposition is knowne to bee cold and moyst, contrary to the quality of Summer; and in this quarter the inward parts of man are very hotte, and being healthfull may receive plenty of foode, because heate is now comforted, and is gone inward, and there increased, and maketh digestion the better.

How the weather will be therein disposed, is noted for each day throughout the quarters.

### A Prognostication.

The sicknesses that accompany this quarter, wherewith many will be grieved, are these and such like; namely, paine in the stomack, laskes of sundry sorts, the cholicke, and iliack passion, falling sicknesse and swooundings, diseases proceeding of rottenesse and corrupt humours, coughes, thinne rheumes, head-ach, with other infirmities.

---

### Of the second-part of the yeere, called the *Spring*.

☉ in ♊ VIII

**T**He Sunne having fully finished the Winter quarter, with the last part of Pisces, beginneth the Spring, the 11 day of March, hee then entring into the first minute of Aries, the Equinoctiall signe, and maketh the day and night of equall length, and continueth untill the 12 of June.

This season of his naturall qualitie is hot and moyst temperately, & likewise very healthfull, and is therefore accounted the time in the yeare to ease diseased bodies in, and to restore health againe to those in whom formerly it hath beene decayed by any kind of evacuation.

The

The particular condition thereof may be seene in the disposition of the season.

The sicknesses of this quarter are melancholic, madnesse, the falling sicknesse, bleeding at the nose, horisenesse, coughes, itch, scabs, many ulcers and small Apostumes, the gout, and paine in the joynts, plurisies, dropies, pestilent agues, shortnesse of breath, faintings, paine in the head, eyes, stomack, rotten feavers, new agues, and other strange diseases.

---

### Of the third part of the yeere called Summer.

☉ in ♋ ♌ ♎.

**T**He third part of the yeare Astronomically, called the Summer quarter, alwaies taketh his beginning at the Sunnes entrance into the first degree of Cancer, the 12 of June: at which time he maketh his greatest declination towards the North, from the Equinoctiall, and causeth the longest day and shortest night in the yeare, and the Summer holdeth on till the 13 of September following.

The predominate qualities of this season (according to his proper nature) are heate and dry-

### A Prognostication.

drynesse, spreading them abroad in each part of the day.

As for the disposition of the weather, you may see it in the daily inclination.

The sicknesses of this time are divers, as burning agues, plurisies, frensies, hot apostumes, divers paines in the head, fundry inflammations, and new infirmities, proceeding especially of hot cholerick humours, wherewith many will be fore vexed.

---

### Of the fourth part of the year, called *Autumne*, or the fall of the Lease.

☉ in ♍ m ♀.

**T**He Harvest quarter (or fall of the lease) beginneth at the time of the Sunnes departure from the last scruple of the 30 degree of Virgo, into the first minute of the second Equinoctiall Signe Libra, being the 13 day of September, and doth last till the 12 day of December, when the Sunne doth enter into Capricorne.

This Season is naturally inclined to bee cold and dry; yet it is evermore disposed to be most inconstant and variable, by meanes whereof it

is

Dade. 1641.

is the nurse of most sicknesses happening in the Spring.

And how the aire is like to bee inclined throughout all Haruest, may be seene in the daily disposition of the season.

The diseases and sicknesses most like to molest men in this quarter, are these & the like, as namely oppilations in the spleene, costiveness, shortnes of breath, fretting in the bowels, falling sickness, and many other melancholy effects, paine in the sides, as stiches and crampes, or convulsions, dropies, flatulæ, the strangurie, colicke, and many more.

---
